

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph no. 5, page 27 with the following amended paragraph:

It is understood that, in the comparative example in the upper row of Fig. 7, the sectional shape of the hole is tapered and the verticalness is degraded as the size decreases and that, in the example 2 in the upper lower row of Fig. 7, the sectional shape of the hole does not depend on the size and, even if the size is small, the verticalness is excellent (linearity of the shape is excellent).
